Error: Note: If you wish to use an absolute template path (for example, `template="/mypath/index.cfm"`) with `CFINCLUDE`, you must create a mapping for the path using the ColdFusion Administrator. Or, you can use per-application settings to specify mappings specific to this application by specifying a mappings struct to `THIS.mappings` in `Application.cfc`. Using relative paths (for example, `template="index.cfm"` or `template="../index.cfm"`) does not require the creation of any special mappings. It is therefore recommended that you use relative paths with `CFINCLUDE` whenever possible.
